

Pig Passage Indicators

pigPRO™ Series

The Intrusive Pig Signaler

The Apache pigPRO™ are manufactured in our Edmonton, Alberta, Canada facility. From Canadian workmanship to the patented fluid seal design, our pigPRO™ are depended upon by pipeline operators the world over.

**When you see the pigPRO™ name,
we guarantee it will indicate more than just quality.**

Detecting cleaning pigs, accurately and reliably.

At Apache, we want to make certain that when a customer is pigging a pipeline, they will always know when the pig has passed a critical point in the pipeline.

To achieve that, we designed the pigPRO™ Series, a patented line of intrusive pig passage indicators that reliably detect the precise location of a cleaning pig as it travels within the pipeline network.

How does it work?

The pigPRO™ indicator is permanently installed on pig launchers and receivers, or very close to a pump station. By doing so, operators are notified the instant that the pig has left the launcher or arrived in the receiver.

The system is fitted with a plunger that is then inserted into the pipe, physically penetrating the pipe bore. When a pipeline cleaning pig passes, it actuates the plunger, which activates either a visual or electrical indicator, or both. The instant that the indicator is displayed, the pipeline cleaner's precise location is revealed.

The Apache pigPRO™ are an INTRUSIVE model as the plunger penetrates the pipe bore. The protruding PLUNGER is actuated by the passage of a pipeline cleaner thereby activating an indicator.

- Bi-directional activation is a standard feature of all our indicator types
- All indicators are manufactured for a specific operating pressure and wall thickness
- Can be flange mounted or mounted using a 2" NPT thread-o-let
- All pigPRO™ can be modified to mount into most competitor's T.O.L.

Components:

Apache's unique patented FLUID SEAL DESIGN does not allow paraffin or other debris to obstruct the operational mechanisms thus ensuring positive indication of the pig's passage. There are no gears in the trigger mechanism and all materials conform to NACE standard MR0175 / ISO 15156.

Pig Passage Indicators

pigPRO™ Series

The Intrusive Pig Signaler

Easily installed without disrupting production

Every model in the pigPRO™ series is easily installed, even while the pipeline is on-stream. So preparing for critical pipeline cleaning doesn't disrupt critical production.

Reduces operational risk

The pigPRO™ features fewer moving parts for ease of installation. The hemispherical design of the pigPRO™ helps eliminate these issues, saving you time and money. To ensure that the indicator is properly adjusted for the individual pipeline, hemispherical plunger sensitivity adjustment and penetration adjustment are standard features.

Bi-directional activation

Every pigPRO™ indicator is bi-directional, so it is triggered by a pig traveling in either direction. Although a pig is rarely required to travel in the opposite direction of the flow in a pipeline while it is on-stream, this capability can be useful when servicing offline pipelines.

Debris or no debris, pigPRO™ performs

Most pig indicators simply cannot operate accurately to indicate pig passage when wax or debris are present in a pipeline. That's not the case with the pigPRO™, which operates reliably regardless of wax or debris. It's specially designed to prevent debris from obstructing its operational mechanisms, so a passing pig is always indicated.

Universal, adaptable

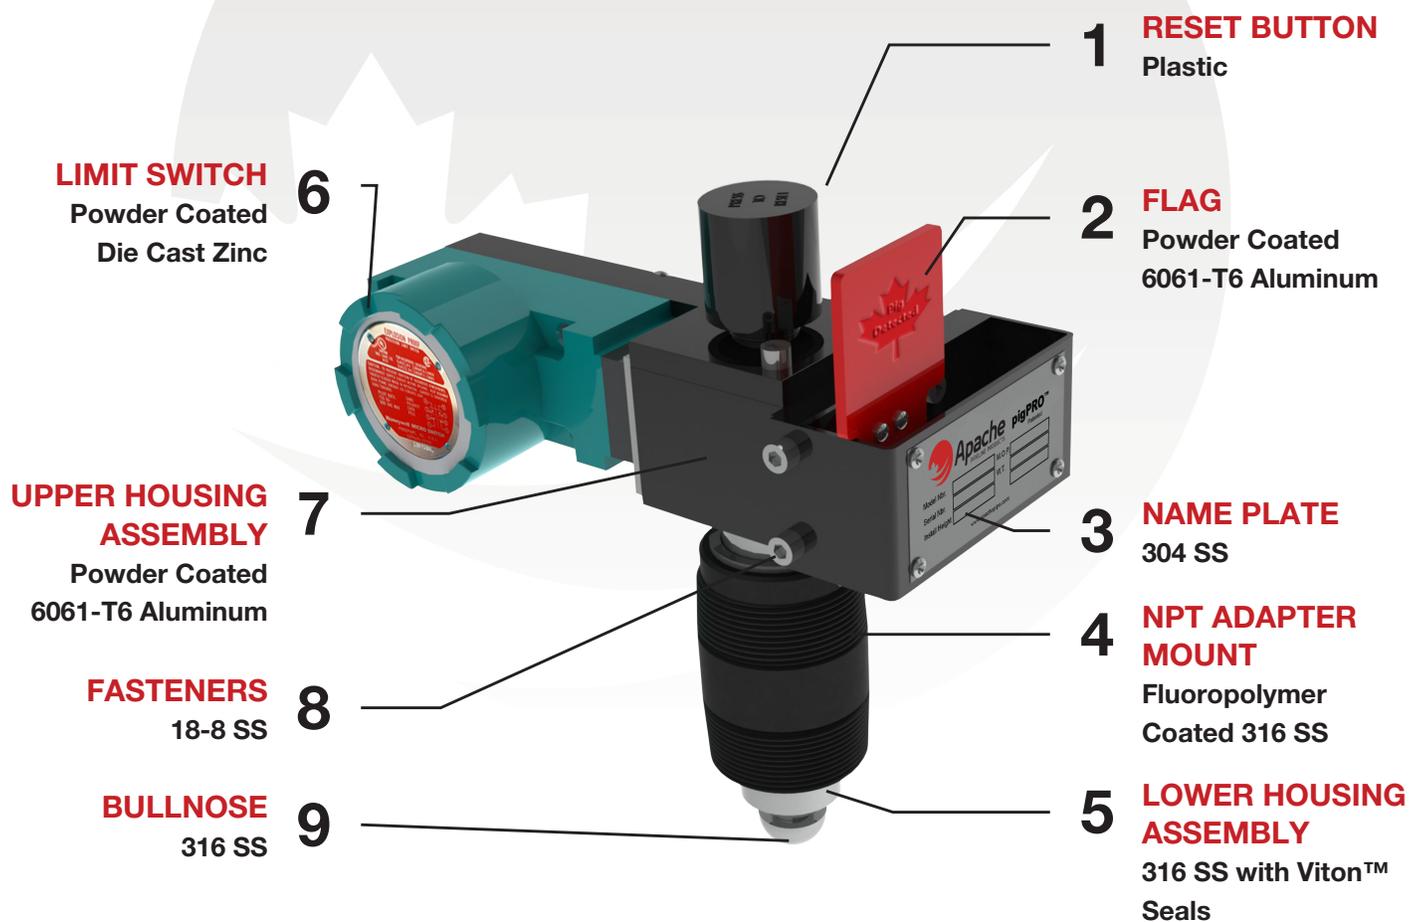

Our ability to retrofit to most mounts makes the Apache pigPRO™ completely versatile.

Primary system components

Every Apache pigPRO™ pig passage indicator includes a thread-mounting nipple, standard lower housing with fluorocarbon O-rings, and a hemispherical plunger with a flag assembly.

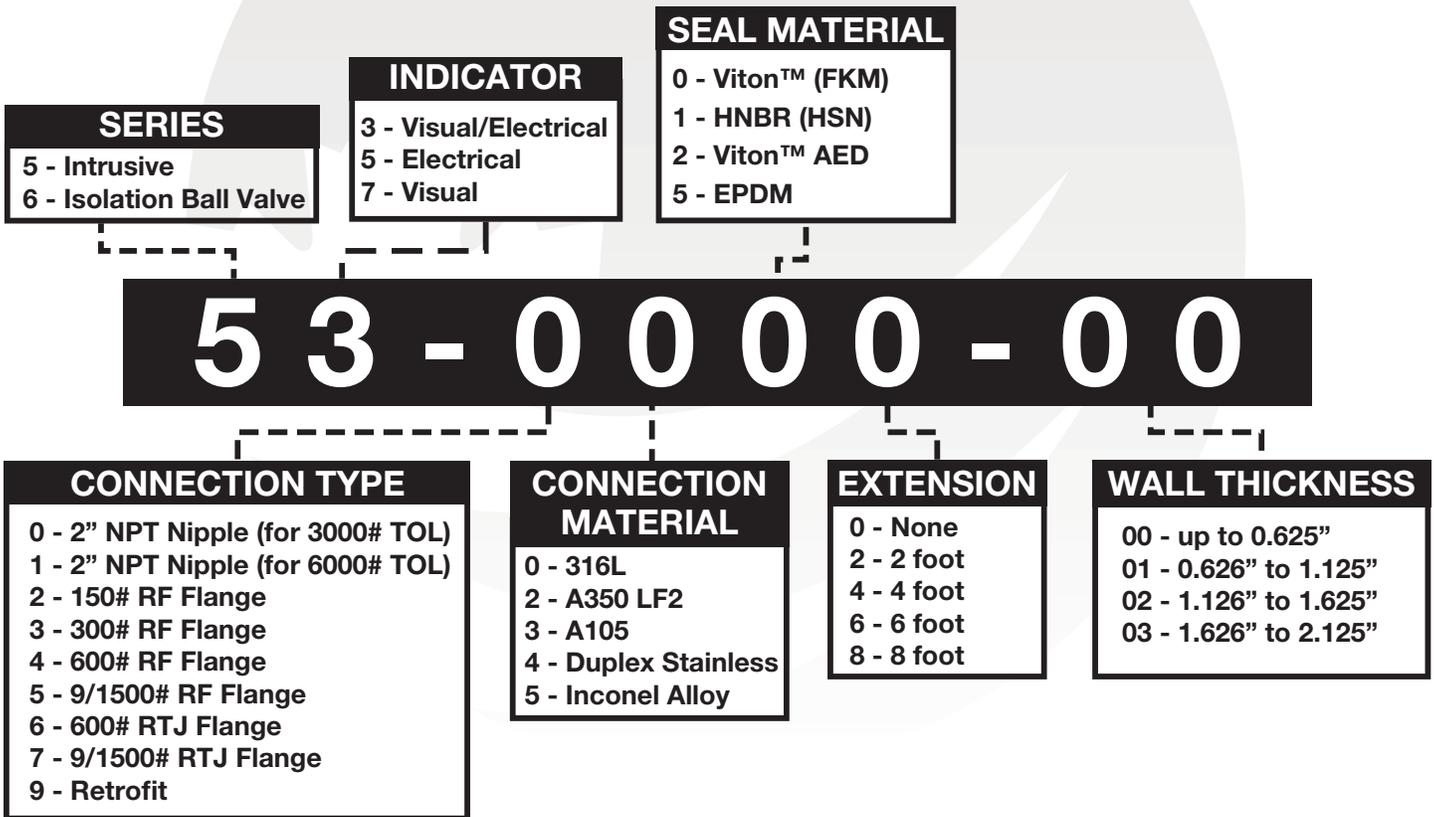

Designed for easy adjustment onsite, even while on-stream.

Material List

Optional Materials Available

Part Number Selection

Series 53

Visual/Electrical Indication, Manual/Auto Reset

The Series 53 is a combination visual and electrical indicator with manual and automatic reset.

Offering both visual and electrical indicator capabilities and manual and automatic reset features, the Series 53 is the most versatile member of Apache's pigPRO™ Series, a patented line of intrusive pig passage indicators that reliably detect the precise location of a cleaning pig as it travels within the pipeline network. When a cleaning pig passes the system's intruding plunger, it activates the plunger and triggers a visual flag indicator, signaling the pig's location.

Features & Benefits:

The Series 53 includes a thread mounting nipple, standard lower housing with fluorocarbon O-Rings, hemispherical plunger with a flag assembly and weather sealed & explosion proof limit switch. The switch employed on this model is NEMA rated, UL listed and CSA certified to suit most applications.

Options:

Flange Mount models are designed to connect to existing flanged connections and are available in ANSI Class 150, 300, 600 or 900/1500 flanges.

Extension Pole:

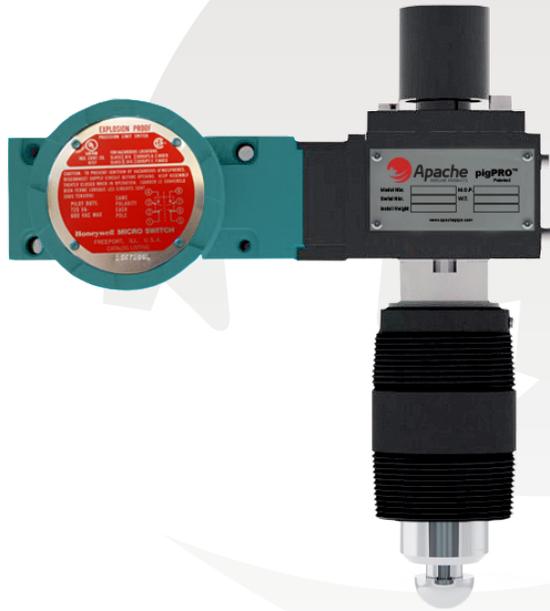

Aluminum extensions can be attached to enable detection of the pigs passage on buried pipelines. All pressure sealing components remain below the extension module. Available in lengths 2' to 10'.

Series 55

Electrical Indication, Auto Reset

The Series 55 is an electrical indicator with automatic reset.

With its optional manual and automatic reset capabilities, the Series 55 is a highly sought after member of Apache's pigPRO™ Series, a patented line of intrusive pig passage indicators that reliably detect the precise location of a cleaning pig as it travels within the pipeline network. When a cleaning pig passes the system's intruding plunger, it activates the plunger and triggers a visual flag indicator, signaling the pig's location.

Features & Benefits:

The Series 55 includes a thread mounting nipple, standard lower housing with fluorocarbon O-Rings, hemispherical plunger and weather sealed & explosion proof limit switch. The switch employed on this model is NEMA rated, UL listed and CSA certified to suit most applications.

Options:

Flange Mount models are designed to connect to existing flanged connections and are available in ANSI Class 150, 300, 600 or 900/1500 flanges.

Extension Pole:

Aluminum extensions can be attached to enable detection of the pigs passage on buried pipelines. All pressure sealing components remain below the extension module. Available in lengths 2' to 10'.

Series 57

Visual Indication, Manual Reset

The base model Series 57 is a visual flag indicator with manual reset.

It is a popular member of Apache's pigPRO™ Series, a patented line of intrusive pig passage indicators that reliably detect the precise location of a cleaning pig as it travels within the pipeline network. When a cleaning pig passes the system's intruding plunger, it activates the plunger and triggers a visual flag indicator, signaling the pig's location.

Features & Benefits:

Our most popular pigPRO™, the base model Series 57 includes a thread mounting nipple, standard lower housing with fluorocarbon O-Rings, hemispherical plunger with a flag assembly.

Options:

Flange Mount models are designed to connect to existing flanged connections and are available in ANSI Class 150, 300, 600 or 900/1500 flanges.

Extension Pole:

Aluminum extensions can be attached to enable detection of the pigs passage on buried pipelines. All pressure sealing components remain below the extension module. Available in lengths 2' to 10'.

pigPRO™ Series 67

*Visual Indication, Manual Reset
Can Be Serviced on Flowing, Pressurized Pipelines*

The Series 67 is a visual flag indicator with manual reset and comes standard with an isolation ball valve.

The Series 67 adds safety and servicing options to our existing line intrusive pig passage indicators. Like other available models in the patented pigPRO™ Series, it reliably detects the precise location of a cleaning pig as it travels within the pipeline network. When a pig passes the intruding plunger, it activates the plunger and triggers a visual flag indicator, signaling the pig's location.

Incorporating a customized ball valve with an extended lower housing into the design of our Series 67 pigPRO™ allows for a safe and simple isolation of the pig passage indicator from pipeline pressure for inspection, maintenance or repair. Complete removal and re-installation on any pressurized line is easy using the Extraction Kit and does not require specialized hot tap professionals or equipment.

The extraction kit contains a pressure relief tool and a custom built extraction cap and jack tube specifically designed for the Series 67 pigPRO™. Other items include O-Rings, fasteners, lubricant and hex key wrenches. All of this is provided in a protective industrial case.

Extraction Kit sold separately

Features & Benefits:

The integral isolation feature of the Series 67 means the cost, time and safety concerns of de-pressurizing and draining a line are eliminated. Now the pig passage indicator can be isolated, removed, repaired and reinstalled while the pipeline is flowing and pressurized. Preventative maintenance, inspection or repair are easily accomplished without specialized equipment or crews.

Extension Pole:

Aluminum extensions can be attached to enable detection of the pigs passage on buried pipelines. All pressure sealing components, including the isolation ball valve, remain below the extension module. Available in lengths of 2' to 10'.

pigPRO™ Series 67

*Visual Indication, Manual Reset, Flanged Adapted
Can Be Serviced on Flowing, Pressurized Pipelines*

The Series 67 is a visual flag indicator with manual reset and comes standard with a flanged isolation valve.

The Series 67 adds safety and servicing options to our existing line intrusive pig passage indicators. Like other available models in the patented pigPRO™ Series, it reliably detects the precise location of a cleaning pig as it travels within the pipeline network. When a pig passes the intruding plunger, it activates the plunger and triggers a visual flag indicator, signaling the pig's location.

Incorporating a customized flanged isolation valve with an extended lower housing into the design of our Series 67 pigPRO™ allows for a safe and simple isolation of the pig passage indicator from pipeline pressure for inspection, maintenance or repair. Complete removal and re-installation on any pressurized line is easy using the Extraction Kit and does not require specialized hot tap professionals or equipment.

The extraction kit contains a pressure relief tool and a custom built extraction cap and jack tube specifically designed for the Series 67 pigPRO™. Other items include O-Rings, fasteners, lubricant and hex key wrenches. All of this is provided in a protective industrial case.

Features & Benefits:

Extraction Kit sold separately

The integral isolation feature of the Series 67 means the cost, time and safety concerns of de-pressurizing and draining a line are eliminated. Now the pig passage indicator can be isolated, removed, repaired and reinstalled while the pipeline is flowing and pressurized. pigPRO™ Series 67 Extraction Kit

The Extraction Kit has the unique tools, fasteners, and soft goods to allow a technician to remove the Series 67 pigPRO™ and then reinstall it onto a pressurized pipeline.

The extraction kit contains custom built extraction cap and jack tube specifically designed for the Series 67 pigPRO™ and a pressure relief tool. It contains required soft goods (O-Rings) that are installed in the lower housing. The kit contains fasteners, lubricant and hex key wrenches as well as spare fasteners. It is provided in an industrial case so that all parts will be available when needed.

Description	Qty
3/8" Hex Flat Socket Head Cap Screws	2
Jack Tube	1
Extraction Cap	1
Hex Bar	1
O-Ring 221 Viton®	2
3/8" Lock Washers	6
3/8" Socket Head Cap Screws	6
1/2" Hex Head Cap Screws	8
Pressure Relief Tool (PRT)	1
Lubriplate No. 105 White Lithium Grease	1
Hex Key Wrench Size 1/8"	1
Hex Key Wrench Size 7/32"	1
Hex Key Wrench Size 5/16"	1

TECHNICIAN'S WRENCHES: To extract the lower housing assembly, the technician will need to turn the 1" hex bar. To do this a 24" breaker bar wrench with a 1" socket is recommended but several other wrenches will work including a large ratchet, flat wrench, crescent adjustable wrench etc.

Hex bolts that are included have a 3/4" head so a 3/4" flat wrench or small crescent adjustable wrench is needed. As these tools are readily available, these are not included in the extraction kit and must be supplied by the technician doing the work.

Flange Mount

Flange Mount models are designed to connect to existing flanged connections.

Available in ANSI Class 150, 300, 600 or 900/1500 flanges.

Extension Pole

Aluminum extensions can be attached to enable detection of the pig's passage on buried pipelines.

All pressure sealing components remain below the extension module.

Available in lengths 2 to 10'.

Extension poles can be used with any Apache pigPRO™
